Plants	Year	Main Foci:	Biology		

Year 1/2 Autumn 2

What should I already know from Reception/Year 1	

	Vocabulary		
roots			
stem			
leaves			
grow			
temperature			
light			
healthy			
unhealthy			
plant			

What will I know by	by the end of the unit?		
What are the names for parts of a plant?	 I know a healthy plant has a rich (dark) green stem and leaves, straight stem that lifts the flow off the soil I know a healthy plant has damp roots 		
Where does water go in a plant?	I know a healthy plant has damp roots, liquid / water in its stem and leaves		
Do plants need water to grow?	 I know the soil around a healthy plant is damp I know that without water a plant will not grow in height, it may shrink in size, leaves can beco brown and brittle I know that too much or too little water can make a plant unhealthy I know without water, soil becomes very hard and the roots dry out 		
Do plants need warmth to grow?	 I know that cool weather stops most plants growing, warm weather speeds up growing I know that plants need warmth to grow, but being too hot or too cold can lead them to become unhealthy I know a plant that is too hot will wither and could die I know a plant that is too cold will greeze and could die if not hardy to cold weather I know a plant kept in the correct temperature will be strong and healthy 		
Do plants need light to grow?	 I know that without light, the plant will not grow healthily (pale leaves, too tall, weak stem) I know that the stem grows up towards light and when light is limited
